

GAP ERP⁺ The ERP - BMS Solution

GAP ERP⁺ "Simplicity is the ultimate Sophistication." - Leonardo Da Vinci
"Simplicity is not a Simple thing." - Charlie Chaplin
"Simplicity is the key to Brilliance." - Bruce Lee
"Simplicity is the by-product of a good idea and modest expectations." - Paul Rand
"Never overlook the Power of Simplicity." - Robin Sharma
"The Road to Simpli-City, is a complex one." - Sanjiv Singh

SIMPLICITY

GAP *Because leaders know better*

SIMPLICITY AT ITS CORE

GAP ERP⁺ is a browser based ERP that can be accessed from anywhere and from multiple devices like your PC, Tablet or a smart phone, even a public computer. In fact you never need to be in office. Still it packs multilevel securities to safeguard your data & work.

It is a highly skilled capable software which does not need a highly skilled man power to learn, control & master. It is a complete Business Management Software, much more than a standard ERP. It de-mystifies Business and makes it simple to understand, operate & control.

It is a result of 29 years of research & validation to cover the best practices and systems of the best Companies in the world.

GAP ERP⁺ is a cloud based application & needs minimal CAPEX.

" We believe that investing in high technology should result in reducing investment in highly skilled man power"

Sales

Sales Module

This module is integrated with manufacturing and accounting. While billing, it updates the stock and the customer account. It also has functions of sending Quotations, P. I.s, booking orders and controlling the Credit limit of customers. It also communicates with the manufacturing to plan for timely deliveries.

Inventory

Inventory Management

Inventory is managed at different levels and different locations. This module takes care of all the planning, indenting, receiving, clearing thru QA, storing and issuing of Finished Goods, Child Parts and Raw Materials. It traces materials to source and builds accountability in the system. It helps in improving the ITR.

Finance

Finance and Accounts

This module takes care of all the accounting needs of an organization. Integrated Purchase Vouchers, Multiple Configurable Cash boxes and Reporting from Balance Sheet and P&L down to viewing of a sales invoice or voucher is possible.

Q.A.

Q.A. (Quality Assurance)

This module integrates Quality checks at all points like Incoming, In-Process and Pre-Despatch. It uses the data and drawings provided by the PLM module to perform the inspection and reporting. It also has functions to do MSA and control on Inspection Equipment including calibration requirements.

PLM

Engineering (PLM) Product Life Management

This module takes care of the manufacturing data. It contains the BOMs and the data related to machines and production. Links with Production Orders and ensures controls as designed are implemented on the shop floor.

NPD

NPD (New Product Development)

This module helps in preparing Part Lists / BOMs, deciding on Make or Buy, Indenting and Costing. It further defines the manufacturing Process, Production cycle times, Product and Process Control Parameters. It gives outputs like Control Plans and Pre-filled Inspection Sheets. It also helps in conducting and controlling FMEAs.

Manufacturing

Manufacturing Module

This module takes care of all the manufacturing activities including receiving raw materials and parts, storing them in RM stores and issuing them to various Production Shops and Assembly Lines. It also handles the flow of materials from Production shops / Assembly lines to Finished Goods Stores routing them thru QA checks wherever required.

HRD

Payroll

HRD and Payroll

Besides preparing monthly Payroll with all the required legal and MS reports, this module keeps a track of all the employees viz a viz their training needs, their qualifications and work experience, and also their Performance Monitoring for Appraisals.

The ideal ERP for ideal Manufacturing

E-CAPA (Knowledge capturing and retention)

This module captures and retains the knowledge and intelligence of the associates and continues to guide the team even after the knowledgeable persons have left the organization.

Portals for Employees / Customers
and Suppliers

Salient Features

Ease of Use

Creating Users / Configuring Users' rights and security / Setting the roles and functions of Users can all be configured very easily by the local Administrator from the Front End.

A strong HRD module that covers Performance Monitoring System (PMS), Behavioural Competency assessment using 360 degree approach, Participative Management in Cross Functional Teams (CFTs), Trainings and Skill Development planning and monitoring.

A Knowledge capturing module which helps in Root Cause Analysis and Corrective & Preventive Actions and saves them for any future study.

GAP ERP⁺
