

Ques: Why is GAP the best ERP solution available for market leaders?

- It is functionally deep.
- It is simple to use.
- It can be accessed from anywhere.
- It keeps the data secure.
- Quick to implement.
- Easy to configure for specific needs.
- It helps companies to adopt best business practices.
- All of the above and much more.

Because leaders know better.

SIMPLICITY AT ITS CORE

GAP OSM is an 'Operating System for Manufacturing' Software, offering configurable solutions to common and not so common problems.

ERP is passé.. it has now graduated to OSM.

GAP OSM is an offspring of a DOS based ERP i.e. **Enterprise Resource Planning** that was in perpetual Beta mode for around 3 decades and has now been born in a new Browser based avatar. It has a unique validated history and has been growing wider and deeper, day by day.

OSM is AWESOME. It is much more extensive than an ERP. It includes all the basic modules of a common ERP but is designed to DIGITIZE your work environment. It also creates and works using IOTs for realtime online controls.

GAP OSM helps the Industry to meet the existing and future challenges:

- **Reduces Time to Market** (Better controls on Design, Development, Production and Right First Time)
- **Enhances Flexibility** (Fast Change Management / Response to changing Customer needs)
- **Improving Quality** (of Products, Services, Communication and almost everything that you do)
- **Increasing Efficiency** (of Men, Machines and Money)
- **Reduction in Cost** (for making you competetive and more Profitable)

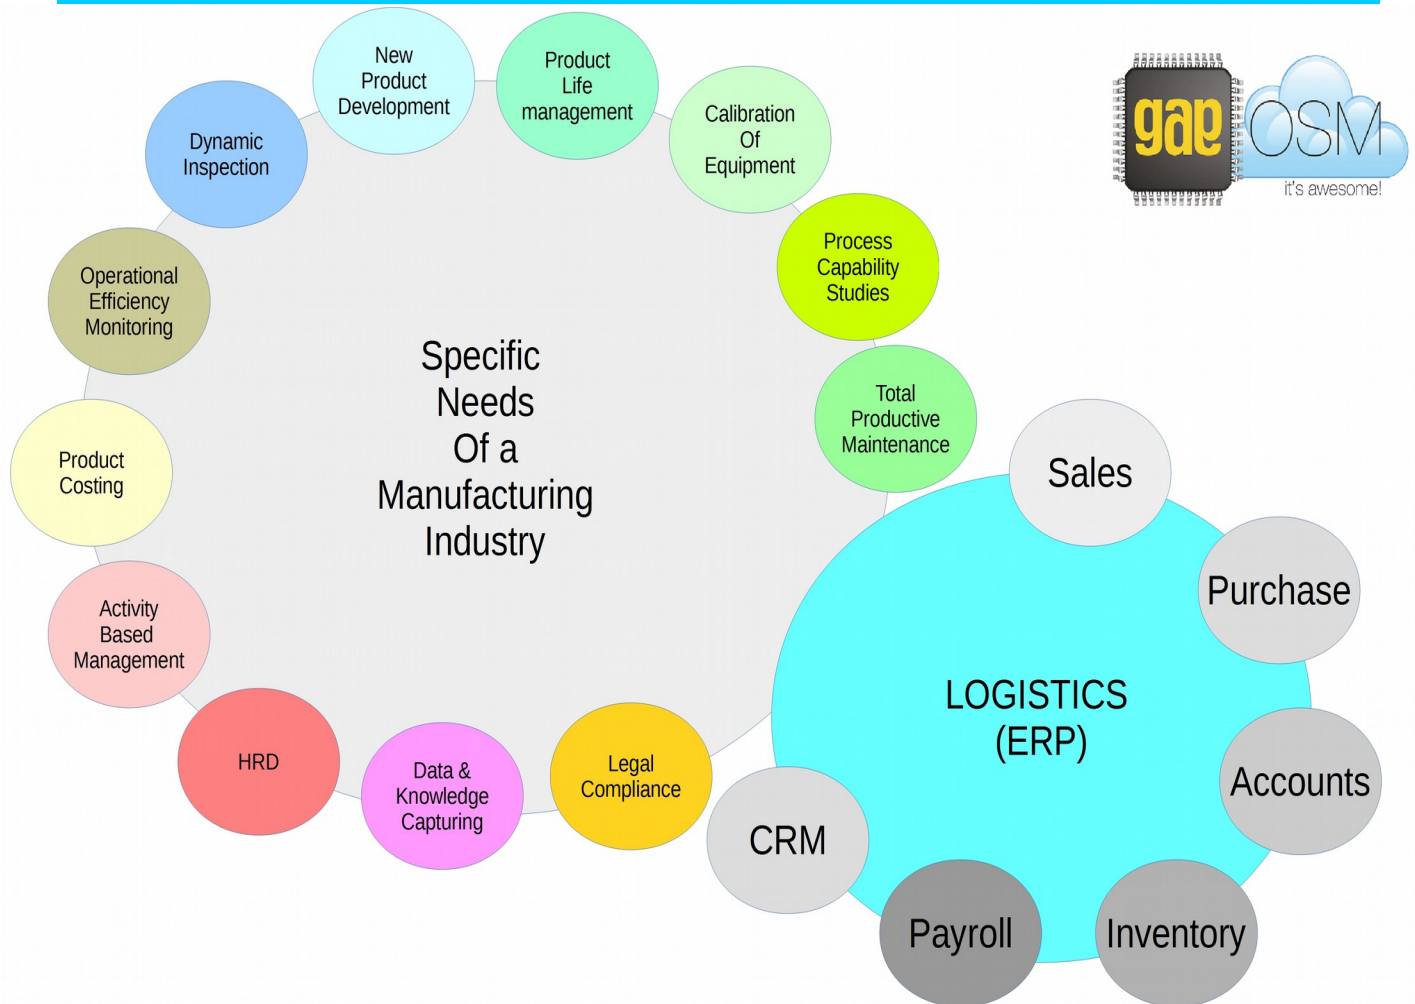

And all this in a simple user friendly way that is easy to own, install, implement and control.Suitable for both Big and Small Businesses. It is available both on the cloud as a SAAS model or a full On-Site installation.It is Browser based and accessible from anywhere and using any device (PC, Laptop, Tablet or Smart Phone). It has configurable security setup for ensuring data safety.

GAP-OSM includes the following :

New Business Development
 New Product Development
 Product Life Management
 Production Planning & Execution
 Sales Management
 Data and Knowledge capturing
 Document Control

Inventory & Warehouse
 Purchase Management
 Finance & Accounting
 All inclusive HRD
 Punch to Salary Payroll
 Legal Compliance
 Quality Management

e-CAPA
 Operational efficiency monitoring
 Online M/c. Monitoring in real time
 Total Productive Maintenance (TPM)
 Product costing
 Activity based Management

We also design and develop customized hardware (IOTs, Connectivity) to capture your data and make it available for monitoring, improved controls and analytics.
